# **CSE205:DATA STRUCTURES AND ALGORITHMS**

L:3 T:0 P:2 Credits:4

**Course Outcomes:** Through this course students should be able to

CO1:: understand the time and space complexity of programs and data-structures.

CO2:: illustrate the importance of Linked List in context of real world problems

CO3 :: differentiate the Stack and Queue data structures for problem solving

CO4:: use of recursion in iteration process and tree data structure

CO5 :: analyze the effectiveness of AVL Tree and Heap Data Structures

CO6:: use of Graph and Hashing techniques in problem solving

### Unit I

**Introduction**: Basic Concepts and Notations, Complexity analysis: time space and trade off, Omega Notation, Theta Notation, Big O notation, Basic Data Structures.

**Arrays**: Linear arrays: memory representation, Array operations: traversal, insertion, deletion, sorting, searching and merging and their complexity analysis.

Sorting and Searching: Bubble sort, Insertion sort, Selection sort

#### Unit II

**Linked Lists**: Introduction, Memory representation, Allocation, Traversal, Insertion, Deletion, Header linked lists: Grounded and Circular, Two-way lists: operations on two way linked lists

# **Unit III**

**Stacks**: Introduction: List and Array representations, Operations on stack (traversal, push and pop), Arithmetic expressions: polish notation, evaluation and transformation of expressions.

**Queue**: Array and list representation, operations (traversal, insertion and deletion), Priority Queues, Deques

# **Unit IV**

**Trees**: Binary trees: introduction (complete and extended binary trees), memory representation (linked, sequential), Binary Search Tree: introduction, searching, insertion and deletion, In-order traversal, Pre-order traversal, Post-order traversal using recursion

Recursion: Introduction, Recursive implementation of Towers of Hanoi, Merge sort, Quick sort

## Unit V

**AVL trees and Heaps**: AVL trees Introduction, AVL trees Insertion, AVL trees Deletion, Heaps: Insertion, Heaps: Deletion, HeapSort, Huffman algorithm

## **Unit VI**

**Graphs**: Warshall's algorithm, Graph Traversal: BFS, DFS, Shortest path algorithm Floyd Warshall Algorithm(modified warshall algorithm)

**Hashing**: Hashing introduction: hash functions, hash table, Open hashing (separate chaining), Closed hashing (open addressing): linear probing, quadratic probing and double hashing.

# List of Practicals / Experiments:

## Array

Program to implement insertion and deletion operations in arrays

# Searching

Program to implement different searching techniques - linear and binary search

## Sortina

Program to implement different sorting techniques – bubble, selection and insertion sort

## **Linked List**

· Program to implement searching, insertion and deletion operations in linked list

Session 2023-24 Page: 1/2

# **Doubly Linked List**

• Program to implement searching, insertion and deletion operations in doubly linked list

## Stack

• Program to implement push and pop operations in stacks using both arrays and linked list

#### Queues

· Program to implement enqueue and dequeue operations in queues using both arrays and linked list

# Recursions

• Program to demonstrate concept of recursions with problem of tower of Hanoi

# **Recursive Sorting**

• Program to implement recursive sorting techniques - merge sort, quick sort

## Tree

· Program to create and traverse a binary tree recursively

# **Binary Search Tree**

• Program to implement insertion and deletion operations in BST

## Heaps

Program to implement insertion and deletion operations in Heaps and Heap Sort

## **Text Books:**

1. DATA STRUCTURES by SEYMOUR LIPSCHUTZ, MCGRAW HILL EDUCATION
